Milk Bar® 12

The Milk Bar 12 is ideal for larger groups of calves and is especially popular with fattening farms. Milk Bar Feeders do not tip forward. This is essential so that all calves get their fair share of milk.

Milk Bar Code 910500

Volume: 90L

Weight: 8kg

Length: 1.2m

Height: 460mm

Width: 430mm

Finger Grips

The Milk Bar 12 is a large feeder so it has a combination of finger grips and handles so you can easily pull the feeder out of the pen.

Aluminium Hooks

The hooks are pre drilled to 25mm and 32mm so you can place them to suit your calf shed.

Interstacking

Feeders interstack with the teats fitted so you can carry more than one at a time. Storage space is reduced as you can stack many feeders inside each other.

Milk Bar Plug 22

Milk Bar Code 900109

Use a Milk Bar Plug to seal off any spare teat holes.

Teats do not need to be removed or flushed through for cleaning.

Daily: Rinse feeders with cold water.

Twice a week: Scrub feeders with hot water (50°C) and Alkali Detergent.

Bend the teats with your brush to flush the milk out of the teat.

Rinse with clean water.
